PROFILE:

I am third year PhD student in theoretical physics and cosmology at the University of Louvain, under the supervision of Prof. C. Ringeval (UCLouvain) and Prof. S. Clesse (ULB).

I am involved in the use and development of numerical relativity tools to study the non-linear dynamics and backreactions of the Early Universe. My research focus are in inflation, reheating and formation of primordial black holes.

I am part of the developing team of GRChombo (www.grchombo.com), an open source numerical relativity code that I use for my simulations. I am also a member of the LISA-PBH working group.

In the past, I also worked as an intern researcher in quantum information systems (in 2013), and as an assistant researcher in computational neuroscience (from 2016-2018).
